

Full-stack Software Engineer

RUN! is a next generation website building platform created expressly for Democratic and progressive campaigns and organizations. We are undergoing dramatic growth and are looking to expand our engineering team to keep up with feature development and provide engineering team redundancy.

You can view our product here: designedtorun.com

Who you are

- Full stack engineer who's well-versed in Typescript and React
- At least 5 years of professional experience in building and maintaining web applications
- Excellent analytical and problem-solving skills and can communicate ideas to others clearly
- Cares greatly about code quality, testing, and thorough documentation
- Able to move quickly and thoroughly, keeping up with the pace of a startup without breaking a sweat
- Is inspired by our mission of working towards a kinder, more democratic world, and defeating authoritarianism

Our stack

The Run platform is a fully custom React application employing a variety of external services and frameworks: Vercel, Next.js, Auth0, Supabase, Stripe, Axiom, Tailwind, Typescript, and more.

Culture

We are a close-knit, high impact team and this role is a good fit for someone who enjoys achieving epic feats with limited resources.

We work out of a beautiful and social shared workspace in Brooklyn, New York. And while we'd much prefer that you join us in person or hybrid, we are open to remote for the right candidate.

We believe in work-life balance, and as such offer all of our employees 4 weeks paid vacation the first year, and 6 weeks paid vacation in subsequent years.

Applying

Applicants can reach us at rob@designedtorun.com with your resume and links to your GitHub and/or live projects.
